This Map is to Help You Find Safe Ogaa (Walleye) in Lakes Harvested by Lac du Flambeau

If you cannot become pregnant, are not nursing, and are over the age of 15, use this map. For ogaa larger than 20 inches, eat fewer meals.

For Ogaa Smaller than 20 Inches:
- Eat up to 8 meals or 64 ounces per month.
- Eat up to 4 meals or 32 ounces per month.
- Eat up to 2 meals or 16 ounces per month.
- Eat up to 1 meal or 8 ounces per month.
- Do not eat ogaa from these lakes.
- Not enough information available.

Number of meals is based on an 8 ounce meal size. If your meal size is larger, you should reduce the number of meals you eat per month.

For Ogaa Larger than 20 Inches, Eat Fewer Meals.
Recommended Maximum Number of Ogaa Meals per Month for Lakes Harvested by Lac Du Flambeau

When Cleaning Ogaa:
- Put ogaa under 20 inches in bags labeled "under 20 inches."
- Label bags with the lake name.

Follow the advice below for maximum number of meals per month.

**SENSITIVE:**
Anyone who is pregnant or nursing, could become pregnant, and children under 15.

**GENERAL:**
Anyone who CANNOT become pregnant, is NOT nursing, and is over 15.

**SUGGESTED MEAL PERIODS:**
- **February**
- **March**
- **April**
- **May**
- **June**
- **July**
- **August**
- **September**
- **October**
- **November**
- **December**

**USING THIS CHART TO FIND SAFER GIGGOONH**

MAXIMUM NUMBER OF MEALS PER MONTH

Advice is for all lakes combined. For example, if you eat four meals in a month from green lakes you should not eat any other meals of ogaa in that month.

**MEAL SIZE**
Meal size is based on 8 ounces. An average 19-inch ogaa will have 8 ounces of meat. If your meal size is larger, you should eat fewer meals of ogaa. If it is smaller, you can eat more meals of ogaa.

**OTHER GIGGOONH**
Giggoonh such as muskellunge, largemouth bass, smallmouth bass, and northern pike will have more mercury than giggoonh such as lake whitefish, herring, bluegill, sunfish, crappie or perch. Try to choose safer giggoonh.

For many native people, giggoonh are part of a traditional and healthy diet. If you rely on giggoonh, choose safer ogaa with lower levels of mercury by following the advice on this map.

**RISKS AND BENEFITS**
Risk: Mercury can damage the nervous system, especially the brain. Fetuses and babies are the most at risk because their nervous systems are rapidly developing. Children exposed to unsafe levels while in the womb have been found to experience delayed development in walking and talking, even though the mother was not affected. Mercury cannot be removed by trimming or cooking.

Benefit: Eating even as few as two to three meals of giggoonh a month may reduce your risk of death due to heart disease.

If you have questions about finding safer ogaa, call GLIFWC at 1-800-250-7574.
